polypoly Enterprise  
polypoly Cooperative  
polypoly Foundation  
polyVerse  
Mission

polypoly builds the ecosystem for a decentralized data economy. For this we provide the necessary organizational and technical infrastructure; enable citizens (polypoly Cooperative), entrepreneurs (polypoly Enterprise) and public servants (polypoly Foundation) a smooth transition from a centralized, to a decentralized data economy.

**The polyVerse** is the organization behind polypoly. It consists of three entities: a company, a foundation and a cooperative. Together, they are building a data economy that ensures sustainable, efficient, and privacy-compliant use of data. Each of the three entities has a different focus:

**polypoly** Cooperative · [polypoly.coop](https://polypoly.coop) · [hello@polypoly.coop](mailto:hello@polypoly.coop)

**polypoly** Enterprise · [polypoly.com](https://polypoly.com) · [hello@polypoly.com](mailto:hello@polypoly.com)

**polypoly** Foundation · [polypoly.org](https://polypoly.org) · [hello@polypoly.org](mailto:hello@polypoly.org)

**polypoly Foundation** establishes cooperatives around the world. It holds all trademark rights and passes them on to all companies within the polyVerse. By building an ecosystem for a decentralized data economy, the foundation ensures that the place of service delivery for digital products is linked to the location of the citizen. The foundation supports countries in developing their digital strategy and advises on the creation of appropriate regulations and laws at national and international level.

**Funding:** through donors, user licenses, data evaluations, and certificates.

polypoly Cooperative focuses on the European Union. It holds the property rights to the technology, the polyPod, and makes it available open source. Together with its members, the cooperative empowers citizens to emancipate themselves within the decentralized data economy and decide for themselves how they want to use their personal data. For this purpose, the cooperative builds the organizational and, together with its members, part of the technical infrastructure for the polypoly ecosystem of the corresponding economic space.

**Financing:** through cooperative shares, as well as the distribution of solutions for other cooperatives and associations, certification and transaction fees.

**polypoly Enterprise** provides access to computing power and data on end devices. In addition, the company creates a smooth transition to a decentralized data economy with polySuite - software solutions and frameworks designed specifically for the needs of businesses. Entrepreneurs can quickly and easily develop polyApps according to a modular principle and thus enter into direct contact with their customers; without intermediaries.

The company enables entrepreneurs to enter a decentralized data economy, protecting their existing business models from data monopolists and enabling the development of entirely new data-based business models.

**Financing:** through investors, as well as development and usage licenses, contract development, white label solutions, data analysis, consulting, training and certification.
